● VAV Mail

● VAV WhatsApp

● VAV Tasks

● VAV CRM

● VAV Accounting

● VAV Analytics

● VAV Engage

Pre-launch / Stealth Prepared for leadership review

By BREMI MARUTHAIYAN

The problem, and how VAV ONE solves it

THE PAIN

No single view of the business

Each subsidiary runs its own systems, so leadership sees the group in pieces, after the fact.

Group reporting is slow and manual

Month-end and group reports depend on exports, spreadsheets, and entities that do not tie out; numbers arrive weeks late.

Every new entity is a new integration project

A new subsidiary or acquisition brings its own systems, so adding it means another round of integration.

Tool sprawl, foreign-built, and costly

Dozens of disconnected foreign tools, integrated at great cost, built for somewhere else, on multi-year rollouts.

THE VAV ONE ANSWER

One platform, one shared dataset

Every business unit visible live, from one screen.

Group numbers roll up automatically

Reporting in days, not weeks, with nothing to reconcile.

A new business unit joins from day one

Same platform, same records, same reports.

One complete platform, built in the UAE

Delivered by one team at a fraction of the cost. Running live at Al Zaabi's 35+ companies.

The problem, and how VAV ONE solves it

THE PAIN

No single view of the business

Each subsidiary runs its own systems, so leadership sees the group in pieces, after the fact.

Group reporting is slow and manual

Month-end and group reports depend on exports, spreadsheets, and entities that do not tie out; numbers arrive weeks late.

Every new entity is a new integration project

A new subsidiary or acquisition brings its own systems, so adding it means another round of integration.

Tool sprawl, foreign-built, and costly

Dozens of disconnected foreign tools, integrated at great cost, built for somewhere else, on multi-year rollouts.

THE VAV ONE ANSWER

One platform, one shared dataset

Every business unit visible live, from one screen.

Group numbers roll up automatically

Reporting in days, not weeks, with nothing to reconcile.

A new business unit joins from day one

Same platform, same records, same reports.

One complete platform, built in the UAE

Delivered by one team at a fraction of the cost. Running live at Al Zaabi's 35+ companies.

The name is the strategy

V Vision

See the whole enterprise live, one view across every unit and function.

A Ambition

Scale without chaos. A new subsidiary joins the same system, not another silo.

V Validation

One validated source of truth, proven running a 35-company conglomerate.

POSITIONING STATEMENT

For large GCC groups whose business is scattered across dozens of disconnected systems, VAV ONE is the **GCC-native connected enterprise platform** that runs the whole group, sales, HR, communication, accounting, and analytics, on one dataset. It gives leadership the **vision** to see the entire enterprise live, and one **validated** source of truth to run it on. Unlike Salesforce, SAP, Workday, or Zoho, assembled over years at great cost, VAV ONE is built in the UAE, complete, and already running live across a 35-company conglomerate.

A market built on multi-entity groups

Why the timing is right

- Conglomerate density**
60 of the Middle East 150 are conglomerates; family firms are about 90% of UAE private business.
- Generational handover**
A 1 to 2 trillion dollar wealth transfer is pushing groups to modernize now.
- Foreign-stack fatigue**
Costly, multi-year, retrofitted suites are ripe to replace.
- E-invoicing deadline**
Mandatory for large UAE businesses from 1 January 2027, forcing finance-system change across every entity.
- Data must stay in the UAE**
PDPL and e-invoicing rules require in-country hosting, with fines up to AED 5M.
- Groups growing by acquisition**
Every new entity is a new integration project; one platform absorbs it.
- A growing wallet**
GCC enterprise software and SaaS compounding at 13 to 18% a year.

Sources: Middle East 150 / Forbes ME, DIFC 2025, UAE FTA e-invoicing guidelines, UAE PDPL, Grand View, GulfSaaSReview. Directional.

Who we sell to first

Primary ICP: large UAE and GCC groups and conglomerates, 1,000 to 5,000+ employees, spread across many business units, running today on a costly patchwork of systems and wanting one GCC-native platform for the whole enterprise.

Many business units

1,000+ employees

A disconnected sprawl

Owner or group-led

Priority verticals: not all enterprises. Lead where organizational fragmentation hurts most.

Diversified holdings

many unrelated business lines

Retail & consumer

stores, brands, entities at scale

Real estate & construction

projects, SPVs, and JVs

Automotive & dealerships

brands, showrooms, service

Trading & distribution

agencies and business units

Healthcare & hospitality

multi-facility, multi-site

Who actually buys

Large-group deals run through a committee of 6 to 10+, but the persona shifts by segment. In family groups, the owner or chairman holds the final word.

Segment	Attributes	Buying triggers	Decision makers	Opportunity
Diversified conglomerate	Many unrelated units, owner-led, 1,000s of staff	Succession, no group view, foreign-stack cost	Chairman / owner, Group CEO, CFO, CIO	Flagship ELA, highest ACV
Large retail / consumer	Many stores, brands, entities; high headcount	Expansion, no unified view, margin pressure	Group COO / CEO, CFO, IT head	High seat count, land and expand
Real estate & construction	Projects, SPVs, JVs; project-based	Reporting delays, project and entity sprawl	Owner, CFO, Head of transformation	Multi-entity fee, analytics pull
Trading & distribution	Many business lines, agencies, brands	Disconnected systems, thin margins	MD / owner, CFO, IT manager	CRM and accounting consolidation

Multi-thread every role: engaging five or more stakeholders can lift close rates about sixfold (Gartner, Forrester, 2026).

How we sharpen the ICP

The ICP is a hypothesis until real accounts test it. This is the method, and the qualifiers it will produce.

HOW WE REFINE IT

1

Mine the Al Zaabi deployment

Which of the 35+ entities adopted fastest, which modules drive daily use, and what size and type of entity gets the most value. Best-fit internal entities become the template for external look-alikes.

2

Score every account, don't describe it

A nine-criteria scorecard (employees, entities, business units, stack complexity, decision-maker access, GCC presence, data-residency need, transformation readiness, ACV potential), each 0 to 2. Pursue 12 and above.

3

Track trigger events

The January 2027 e-invoicing deadline, an ERP renewal inside 18 months, a new CFO or CIO, an acquisition, a succession. A trigger watchlist makes the ICP timed, not static.

4

Detect the foreign stack

Groups already paying for Salesforce, SAP, Workday, or Microsoft have the problem VAV ONE solves. Job postings, LinkedIn skills, and partner case studies identify them before a conversation.

5

Learn from every deal

Once POCs run, a win/loss process (why they bought, why they stalled, which entities activated fastest) refines the ICP on evidence, every quarter.

WHAT THE ICP BECOMES

Must-have

- Headquartered in the UAE or GCC
- Five or more operating entities
- 1,000 or more employees
- Owner or group-CEO accessible
- Running three or more disconnected core systems

Strong-fit signals

- UAE-based, family-owned, owner-led
- Mid-handover or under a transformation mandate
- Foreign-stack renewal within 18 months
- Data-residency requirement
- Diversified holdings, retail, or real estate

Disqualifiers

- A single operating entity
- Deep manufacturing or clinical ERP as the core
- A recently completed SAP or Oracle program
- No access to the owner or group CEO

UAE first, then the wider GCC. The Al Zaabi network reaches owner-led groups here, so that is where the ICP is proven before it travels.

Criteria are strategic hypotheses, to be confirmed against real accounts in the first 90 days.

Who we compete with

Tier 0

The foreign multi-vendor stack

Salesforce or Dynamics, SAP or Oracle, Workday, and Microsoft 365, stitched together at great cost. The status quo, and the safe choice, is what we replace.

Tier 1

Full enterprise suites

SAP, Oracle, Microsoft Dynamics 365, and the all-in-ones Odoo and Zoho One. Deep or cheap, but foreign, generic, and not built for the GCC.

Tier 2

Regional point players

CorporateStack, Focus, Bayzat, Darwinbox. Local, but partial (HR-only or ERP-only), not one complete platform proven at conglomerate scale.

The white space: *no one else is GCC-native, complete, and conglomerate-proven at once. We replace the foreign stack with one regional platform, supported by one team.*

SWOT

Strengths

- Built in the UAE: the only region-built enterprise platform
- One complete platform: ops, sales, HR, accounting, analytics
- Conglomerate-proven, runs Al Zaabi's 35+ companies
- One dataset, group-wide visibility
- Integration and support by one team

Weaknesses

- Pre-launch, one customer, no external references
- Enterprise-readiness to prove (security, scale, SLAs)
- Team-delivered integration is hard to scale
- Finance depth may trail SAP or Oracle

Opportunities

- Groups modernizing off costly foreign stacks
- Rising demand for GCC-native, data residency, local support
- 1 to 2 trillion dollar generational handover
- Cost pressure favors vendor consolidation

Threats

- Entrenched Salesforce, SAP, Oracle, Microsoft
- Long, committee-driven enterprise cycles
- Preference for safe global brands
- Regional specialists like Darwinbox and Focus

The strategic call

We win as the GCC-native, complete platform that replaces the foreign stack, not by out-featuring SAP.

Win on

GCC-native, one complete platform, conglomerate-proven, one team end to end, at a fraction of the foreign stack's cost.

Concede

No external customers yet, and every new customer is a hands-on project for our team. To scale, prove enterprise-grade security and make onboarding repeatable, not bespoke.

Target

Large GCC groups tired of paying foreign prices to stitch foreign systems together.

Getting to the right price

No price is set yet. This is how we reason to a defensible one, from research, not guesswork.

Why this is hard

No willingness-to-pay data

Pre-launch, no external customers. Every number is reasoned, not measured.

It sits between two worlds

An all-in-one (cheap), but enterprise, GCC-native, and complete (expensive). The anchors are 3 to 10x apart.

A challenger with no references

Enterprise buyers trust names they know. Price must do the work references normally do.

How we got there

1

Map what every relevant competitor actually charges

2

Build what the stack VAV ONE replaces really costs a large group

3

Set the floor and ceiling that bracket a fair price

4

Choose a model and strategy, then derive the price points

What competitors charge

The foreign best-of-breed stack

Salesforce (CRM)	\$165 to \$175 / user
Microsoft 365	\$36 to \$60 / user
Workday (HCM)	\$100 to \$175 / emp / yr
SAP S/4HANA	\$180 to \$400 / user
Dynamics 365 (CRM)	~\$180 / user

Expensive and fragmented. Add integration, and total cost runs 3 to 5x the licences.

All-in-one suites

Zoho One (45+ apps)	\$37 / emp or \$90 / user
Odoo (80+ modules)	\$25 to \$33 / user

Cheap and broad, but generic, SMB-grade, and foreign.

Bundling saves about 50%. Buying the apps separately costs nearly double the suite. Buyers already know a bundle beats the parts.

2026 published or independently reported list prices. USD to AED at about 3.67.

The band: floor and ceiling

For a 3,000-employee group, per year. The price has to sit well below what they pay today, and above the cheapest generic suite.

Ceiling: what this group pays today for Salesforce, SAP, Workday, and Microsoft, plus the integration between them. It matches a published GCC benchmark of about \$12M over three years.

Floor: what the cheapest credible all-in-one would cost the same group. Pricing at or below it risks looking cheap.

The move: as an unproven challenger, we launch below the floor on purpose, to win the first flagship references, then raise toward the value band once VAV ONE is proven.

Foreign-stack build: Microsoft 365 about AED 5.5M, Salesforce 4.4M, SAP 2.6M, Workday 1.6M, integration 0.5M. Not every layer is replaced in every group, so the real saving depends on what a group runs today.

The model, and the strategy

The model

- Per active user. the daily doers, not every headcount
- Three bundled tiers. good, better, best; the bundle beats the parts
- Billed annually. with volume discounts by scale
- All-employee option. for groups where nearly everyone uses it

Why: simple, familiar (every SaaS pricing page), captures scale, supports bundling.

The strategy

Penetration price low to win the first references fast, and de-risk an unproven vendor.

Value price mid to capture worth, but face more resistance with no references.

Recommended: lean penetration now to win three to five named references, then raise the list toward value once proven.

The recommended pricing

Priced above the cheapest all-in-one (Odoo), below the premium one (Zoho), and far below the foreign stack. Per active user, billed annually.

Core

AED 70 / user / mo

Best for: Getting every business unit onto one system.

- HR, Mail, WhatsApp
- Tasks, Engage
- Standard support

Business

AED 110 / user / mo

Best for: Running sales and finance on the same records.

- Everything in Core
- CRM, Accounting
- Group-wide sales and finance reporting
- Priority support

FLAGSHIP

Complete

AED 150 / user / mo

Best for: The whole business on one operating system.

- Everything in Business
- Analytics, Report Builder
- Group-wide dashboards across every entity
- Dedicated success manager, priority support

Every plan includes: one shared dataset · multi-entity switching · web and mobile · built and run in the UAE · white-glove onboarding by the VAV ONE team

Volume discounts: 1,000+ users 15%, 2,500+ 25%, 5,000+ 30%. **Early-adopter discount** for the first design partners. **Floor:** do not list below about AED 90 (Odoo level), or margin and enterprise credibility break. Integration is a separate one-time fee. Support levels are a packaging hypothesis to confirm.

What a flagship deal costs, and saves

A 3,000-person group on the Complete plan, about 1,350 active users.

The simple math

1,350 active users

x AED 128 / user / month

after the 15% volume discount

= about AED 2.1M a year

one vendor, one bill

Annual cost for the same 3,000-person group

VAV ONE

AED 2.1M

Foreign stack

AED 14.6M

Salesforce, SAP, Workday, and Microsoft, licences and integration, for the same group.

About 85% less than the foreign stack. A real ACV, an obvious saving, and a price a challenger can actually win with.

Honest caveats: every figure is derived, not observed, and the saving depends on which layers a group actually replaces. The exact price is confirmed only by willingness-to-pay testing with the first design partners.

How we reach the buyer

Lead with Sales-Led Growth. At multi-million-AED deals, a 6 to 10+ person committee, and 6 to 9 month cycles, self-serve cannot close. Sales-led, powered by ABM and partners. Product-led and community come later, once proven.

TOP 5 CHANNELS, RANKED

#	Channel, where our ICP already looks	Ease (small team)	Time to result	Cost efficiency
1	Al Zaabi owner-to-owner network: warm intros to peer groups	High	Fast	Very high
2	Al Zaabi's business ecosystem: suppliers, JV partners, relationship banks, major customers of the 35+ companies	High	Fast	Very high
3	ABM on LinkedIn to named C-suite at target groups	Medium	Medium	High
4	Partner co-sell: GCC system integrators, Big-4 transformation advisors, UAE telco enterprise arms	Medium	Slow	High
5	Family-business bodies and CXO forums	Low	Slow	Medium

Across every channel: live showcase visits to Al Zaabi entities, so buyers see the platform running a real group.

First 30 days, channel 1: (1) map Al Zaabi's relationships to 15 to 20 peer groups and secure 5 warm-intro commitments; (2) arm a one-page exec brief with the foreign-stack-vs-VAV ONE ROI; (3) run 3 to 5 exec briefings and convert 2 to 3 into paid POC conversations.

Four messaging pillars

Four capability clusters, each with the outcome, the mechanism that delivers it, the CFO impact, and the competitive edge.

	One Connected Platform	Built for the GCC	Total Group Visibility	One Vendor, End to End
Headline	One group, one dataset, one truth.	Built here, for here, not retrofitted.	See the whole group live, on one screen.	One partner, complete, at a fraction of the cost.
Outcome	Consolidate 5 to 10 systems into one; reporting in days, not weeks.	Data residency and WhatsApp, built in.	Group-wide reports in a day, one source of truth across entities.	Live in months, at a fraction of the foreign-stack cost.
Mechanism	Every module on one shared dataset, multi-entity switching, no integration.	Built and run in the UAE, WhatsApp built in, a local team on the ground.	Multi-entity switching plus native Analytics and a Report Builder.	The VAV ONE team owns integration, customization, and support end to end.
CFO impact	Cost: retire duplicate licences and integration overhead.	Risk: compliance and data residency by design.	Growth and risk: faster decisions, no subsidiary blind spots.	Cost and risk: one bill, one accountable vendor.
Edge	vs the Salesforce, SAP, Workday stack: nothing to integrate.	vs Salesforce, SAP, Zoho: localized, not built for the Gulf.	vs point tools: one group view, not 20 silos.	vs incumbents: our team owns it, with real named proof (Al Zaabi).

Outcomes are logical, not measured; VAV ONE is pre-launch. Full framework in the messaging document.

How we sell, and the year-one goal

A long, high-value enterprise sale. Land one entity, prove it, then expand across the whole group.

THE SALES MOTION • 6 to 9 months end to end

THE YEAR-ONE GOAL

The funnel behind it: about 20 to 25 warm intros, 10 to 12 discoveries, 5 to 6 paid POCs, 3 to 5 signed. Intros must start in the first quarter.

Not a volume game. As a pre-launch challenger, year one is about winning a few flagship groups as named references. Each lands in one entity, proves out, then expands across the group and compounds. At early-adopter pricing, that is roughly AED 5 to 8M ARR.

Targets and funnel are illustrative. Replace with real ACV, cycle length, and rep capacity once the first deals close.

Keep them, and grow them

Onboarding and time-to-value

White-glove onboarding, landed in one business unit. The first live group dashboard is the aha moment, leadership sees the whole group at once. Target: first value in weeks, with the day-30 activation benchmark set from Al Zaabi's own adoption data.

Retention and engagement loops

Daily-use modules (WhatsApp, Tasks, CRM) build habit. The weekly group report makes leadership dependent. Low-usage alerts trigger CSM outreach; lifecycle nudges and quarterly reviews keep accounts active.

Expansion and monetization

Land and expand: each new business unit and entity is expansion. Upsell Core to Business to Complete; usage thresholds (users, WhatsApp volume) and owner-to-owner referrals drive net revenue retention.

Metrics to track (daily)

Entity activation (entities live of entities signed); module adoption per account; seat utilization (active versus licensed users); executive-dashboard usage; net revenue retention from entity expansion; time-to-value. Watch the first 90 days, where most churn happens.

The GTM scorecard

The numbers leadership will see monthly, by stage of the funnel. Targets are set from enterprise SaaS benchmarks until real data replaces them.

Acquire

- Qualified pipeline: groups and AED value, against the year-one funnel
- Warm-intro to discovery conversion
- Win rate on paid POCs

Land

- Sales cycle: target 6 to 9 months, intro to signature
- Average contract value: about AED 2.1M for a flagship group
- Security-review pass rate
- Time to first entity live

Grow and retain

- Entities live per account, and net revenue retention: target 115% or better
- Logo churn: under 10% a year
- CAC payback: 18 to 24 months
- Gross margin above 75%, with LTV to CAC at 3 to 1 or better

One north star: entities live on VAV ONE. Every entity is proof, expansion revenue, and a reference at once. Every other metric explains why that number is moving.

Benchmarks from 2026 enterprise SaaS ranges. Replace with VAV ONE's own targets after the first design-partner deployments.

The first 90 days: from strategy to market validation

The plan to take VAV ONE's GTM from hypothesis to evidence in the first 90 days, while preparing the reveal.

Days 1 to 30 Discover and validate

OBJECTIVE

Learn what is truly proven at Al Zaabi, and where the external hypotheses are weakest.

KEY ACTIONS

Deep-dive the 35+ entity deployment and usage data. Interview leadership, product, sales, and CS. Quantify module adoption and the strongest cross-module workflows. Validate the ICP, map the buying committee, shortlist design partners. Stand up the GTM foundations (CRM, pipeline stages, a weekly pipeline review) and secure leadership sign-off on ICP, positioning, and pricing direction.

DELIVERABLES

ICP v1 and scorecard; persona map; competitive baseline; proof-point and missing-proof list; target-account list; GTM risk register; GTM operating rhythm and foundations.

SUCCESS SIGNALS

15+ interviews; adoption quantified; 15 to 20 named accounts.

Days 31 to 60 Build and prepare

OBJECTIVE

Turn the validated ICP into a sales-ready story, kit, and pipeline plan.

KEY ACTIONS

Finalize ICP and personas. Refine positioning; build platform and module messaging. Battlecards, exec pitch, demo narrative, one-pagers, objection handling. Test pricing with prospects. Recruit design partners. Build the ABM list; set KPIs and SLAs. Build the external presence for the reveal, initiate partner channels, and propose the GTM hiring plan and budget.

DELIVERABLES

Positioning and messaging frameworks; enablement kit; battlecards; pricing hypothesis; design-partner program; ABM list; measurement framework; external presence; partner-channel plan; GTM hiring plan and budget.

SUCCESS SIGNALS

Reps certified; 3 to 5 design partners committed; pricing tested with 5+ buyers.

Days 61 to 90 Execute and launch

OBJECTIVE

Put the strategy in front of real buyers and let evidence decide.

KEY ACTIONS

Run the design-partner motion and paid POCs. Exec briefings and discovery. Launch ABM; enable sales. Test messaging and pricing live. Capture objections and feedback; stand up win/loss. Track activation and time-to-value. First case study; draft the six-month plan. Run the Go/No-Go readiness gate and recommend the first GTM hires against pipeline.

DELIVERABLES

Validated ICP; first qualified pipeline; design-partner references; validated messaging; pricing learnings; launch retrospective; six-month roadmap; launch-readiness checklist; first-hire recommendation.

SUCCESS SIGNALS

2 to 3 paid POCs live; first reference secured; pricing band narrowed.

Ninety days to replace assumptions with evidence, and to build the GTM machine that turns it into pipeline: a validated ICP, a tested price, the first named references, and the systems and team plan to scale them.

The launch plan, T-30 to T+30

T is launch day, the public reveal. The plan runs from 30 days before to 30 days after, following the 90-day run-up on the previous slide. Owners and deadlines for every task are in the launch document.

Phase 1 · Pre-launch

T-30 to T-1

- Assets ready: landing page, demo video, one-pagers, email sequences
- Sales enablement complete: pitch, demo narrative, and objection handling certified
- Lock the first 2 to 3 design-partner references and the Al Zaabi case study
- Regional business-media PR and event prep, gated on having references
- Go / No-Go at T-2: security pack, SLA, and DPA ready

Phase 2 · Launch week

Day 0 to T+7

- Reveal day: press, LinkedIn, exec briefings, launch event
- War room and daily standups
- Real-time monitoring and rapid-response support
- Channel-by-channel posting; every demo request followed up within 24 hours
- First retrospective at T+7

Phase 3 · Post-launch

T+8 to T+30

- Feedback capture and a bug-triage loop
- Follow-up campaigns for non-converters; book POCs from launch interest
- Daily metrics review through T+14, then weekly
- 30-day review against pre-set success criteria; decide the next moves

Enterprise reveal, adapted from 2026 B2B SaaS launch playbooks. Full owner-and-deadline plan in the launch document.

Launch risks and mitigation

Six risk areas, each with severity, probability, and how we spot and mitigate it. The full matrix with early-warning signs is in the risk document.

Risk area	Top risk	Sev	Prob	Mitigation
Product & fit	Built around Al Zaabi's processes; may not fit other groups' ways of working	High	Med	Design partners across two or three industries; log every workaround as a roadmap item
Technical & scalability	Bugs or downtime under real enterprise load	High	Med	Soft-launch to partners, load-test, staged rollout, on-call
Market & adoption	Thin pipeline, slow committee buy-in	High	Med	Al Zaabi warm intros, paid POCs, multi-thread 5+, validate ICP
Financial & pricing	Wrong price or tiers; 6-to-9-month cycles strain cash	Med	Med	Willingness-to-pay testing, penetration list, annual prepay
Security & compliance	A data-residency or security gap blocks a deal	High	Med	UAE data hosting, pursue SOC 2 / ISO, early security review
Operational & resource	Support overload; a single-person GTM as a point of failure	Med	High	Phased intake matched to capacity; hire the first CSM ahead of the second group; document runbooks

Severity and probability are pre-launch estimates. Full matrix with early-warning signs and owners in the risk document.

What we need to move

Approve the pricing direction: penetration-led, per active user, three tiers, with price points held as hypotheses to validate with design partners (slides 11 to 16)

Confirm the ICP and the three beachhead verticals, UAE-first (slides 5 and 7)

Commit to the stealth design-partner phase: three to five groups at early-adopter pricing, with the reveal gated on the first references (slides 19, 22, 23)

Fund enterprise-readiness before the reveal: SOC 2 and ISO, an SLA, and a security pack (slides 9 and 24)

Approve the GTM foundations and the first hires: CRM and operating rhythm now, the first AE and CSM sequenced against pipeline, and the launch budget (slide 22)

Adopt the scorecard, with entities live as the north star, as the monthly leadership review (slide 21)
